Q: Cannot make an output on a bash script I'm new to bash scripting, and when I run the script, nothing is outputted on the screen. I have a C++ program which outputs to the screen, and uses a bash script to query the database and generate output. This is my first time making a bash script, so I'm not really sure how to troubleshoot this. `#!/bin/bash while true do db=`psql -c "select sleep(60)"` db2=`echo "$db" | grep -o '^0*$'` db3=`echo "$db" | grep -o '^0*$' | tr -d '0*$'` db4=`echo "$db" | grep -o '^0*$' | tr -d '0*$' | cut -d ':' -f2` db5=`echo "$db" | grep -o '^0*$' | tr -d '0*$' | cut -d ':' -f2` db6=`echo "$db" | grep -o '^0*$' | tr -d '0*$' | cut -d ':' -f2` if [["$db3" == "$db4"]] && [["$db5" == "$db6"]] then echo "Good" else echo "Bad" fi done` Thanks in advance
A: There are two problems. The first one is that the variable db is not set. And the second one is that you are using a dot (.) instead of a colon (:) in your echo queries. For example, this: `db=`psql -c "select sleep(60)"` db2=`echo "$db" | grep -o '^0*$'` Should be: db=`psql -c "select sleep(60)"` db2=`echo "$db" | grep -o '^0*$'` The second one should also be corrected, this: db=``

Q: use of default enum values I was reading a blog entry here about using default values for enums. So I made the following enum: `public enum IdStringEnum{ ID_DEFAULT, ID_GENERATED_BY_METHOD, ID_USER_DEFINED, //this is where I'm running into problems ID_USER_DEFINED_UNIQUE_ID(10); private int id; private int uniqID; private IdStringEnum(int id, int uniqID){ this.id = id; this.uniqID = uniqID; } public int getId(){ return this.id; } public int getUniqID(){ return this.uniqID; } }` but because this enum has not value associated with ID_USER_DEFINED, we will always get ID_DEFAULT, or even an exception? How am I going to be able to get a unique ID for my database? A: That's the point of default values - to give you a default value when you create the enum, and let you override it when you create the enum. For example: `public enum IdStringEnum { ID_DEFAULT, ID_GENERATED_BY_METHOD, ID_USER_DEFINED, ID_USER_DEFINED_UNIQUE_ID(10); // no default value, like in your code private int id; private int uniqID; private IdStringEnum(int id, int uniqID) { this.id = id; this.uniqID = uniqID; } // public static methods, of course public static IdStringEnum generateEnum()`
