This program can help you convert video files from the MP4 format to other extensions, including AVI, MPEG, WMV, VOB and 3GP. The interface of the program is very plain and easy to navigate through. Video tracks can be imported into the list via the file browser only, since the "drag and drop" method is not supported. Batch processing is allowed. In the queue you can check out the name, size and time of each clip. Once you specify the output format and directory, you can proceed with the conversion process. In addition, you can modify audio and video parameters when it comes to the size, quality, frame rate, aspect ratio, sample frequency rate, channels and volume. But you can also preview clips, remove an item from the list or clear the entire queue, as well as enable the program to open the destination folder or to automatically shut down the computer once all tasks are completed. The video conversion tool uses a pretty low amount of system resources, quickly finishes a task and manages to keep a fair image and sound quality in the output videos.
