## What's New in the AutoCAD?

New data-related annotations: Text, orientation, icon, foreign key, key code, and more. AutoCAD now remembers all the data that you enter, so you can edit it again later. Related objects and other annotation features are now visible in the Properties palette. Added more precision in the number format. You can format numbers to the nearest 1/5, 1/3, 1/2, 1/10, and 1/100 of a value. The Get Missing Data Automation can now be run multiple times from the menu bar, to speed up completion. AutoLISP support. Expanded Xrefs Xrefs now show images at a large size, so they are easier to see and navigate. If you cannot see the Xref view, press the ESC key to hide it. In Windows/Mac, the xref view disappears after it is used once. To show it again, click the symbol in the "Xref Symbol Tool" toolbox. You can also drag the xref symbol icon from the toolbox to the view window. In Windows/Mac, the xref symbol disappears after it is used once. Xref options are now visible in the "Xref Symbol Properties" dialog box. New Xref options: You can now drag and drop images to and from the Xref window. For images, you can export and copy them to the clipboard and import them again. You can also paste them to the drawing from the clipboard. You can set the Xref size. You can link to text using the text xref type. You can control the precision of the Xref annotations. The Xref window size can now be set. Drag-and-drop support for Xrefs in the Xref View (Windows only). Optimized Xref output (Windows only). Reverse the order of Xrefs (Windows only). Easier to use Preference dialog box The Preference dialog box is available from the File menu now. It provides easier access to settings for importing, exporting, and creating Xrefs. No longer needed for editing imported Xrefs, but still available from the Xref Edit tab to convert lines to polylines.
