Photoshop Elements (see Chapter 8 for more) is Adobe's Photoshop-ed substitute for Photoshop, where more than half the features are available. Although Photoshop can be used for a lot of purposes — including image manipulation and retouching — it is probably most often used in the reproduction of architectural graphic images. Other uses include but are not limited to: Fine art Adding special effects to images Measuring and transferring images for poster and card designs Cleaning up bits and pieces of a photo It's a complex program and requires some advanced skills to manipulate images. Fortunately, Photoshop includes good tools for beginners to get you started. In this section, I show you how to use Photoshop's tools to clean up and manipulate images. If you want to manipulate an image but are less handy with the professional tools, you can perform similar operations using a traditional image-editing program or even a standard paint program such as Paint Shop Pro or Paint Shop Pro X. The results can be essentially the same. Photoshop does give you a little extra, though, including

special effects and advanced tools. Working with the Layers palette Photoshop can seem a bit overwhelming at first when you're faced with the large number of tools and options that it provides. A good way to start is to select a few of the tools and open the Layers palette (see Figure 9-1), as shown in the figure, and then select a part of an image where you want to apply the action. Photoshop's default workspace is a 2-D workspace; that is, it works on images as raster graphics — 2-D rectangles on the screen. No matter how much time you spend in Photoshop, it will be a 2-D program until you save the image as a vector graphic, described in the next section. If you have any layers active, they appear in the Layers palette at the bottom of the screen. You can click the eye icon next to the name of an active layer to hide that layer. I generally hide layers that are only slightly visible in the image so they don't interfere with other layers. Image editing in Photoshop is layer-based. Each of the layers in the image have their own independent editing options. You can apply a filter or adjustment to the entire layer or to just a portion of the layer. ****Figure 9-1:**** Open the Layers palette for a layered image.

Shimla, Sep 3: The Himachal Pradesh Cabinet today decided to provide linkage facility for all high-speed trains travelling from Shimla to Delhi through the new airport at Manali. The Cabinet, chaired by Chief Minister Virbhadra Singh, approved the proposal to set up a Flyway Railway at Manali, with a spur line connecting to Shimla, Chandigarh, Ludhiana, Amritsar, Delhi, Nizamuddin and Mumbai in joint venture by the Railways and the Manali International Airport Ltd (MIAL). "Shimla Cantonment Railway (SCR) has asked for linkage to Delhi. However, MIAL has already been requested by Northern Railway to connect the new airport terminal. So, linking all trains to Manali from Delhi would be a natural choice," said Transport Minister Dr Harsimrat Kaur Badhwar. She said that the cost of linking all high-speed trains from Manali to Delhi would be 2.5 billion rupees. The decision has been taken in order to provide an alternative link to the people of Delhi. The new Airport will also provide a link to the world. It will be linked to Jaisalmer in Rajasthan through a spur line. Badhwar said that SCR

has a network of seven stations on the busy Delhi-Shimla route. "Our goal is to link the two, as well as two other high-speed routes -- to Guwahati and Jammu and to Durgapur," said Badhwar. She said that Shimla cantt railway has discussed it with the Delhi Metro on a feasibility study. Badhwar said that in order to link to five major cities, linking Shimla to Manali would be the most appropriate. She also said that SCR has no provision for bike rickshaws. A decision has been taken to provide only 2,000 rickshaws to the bus services to cater to the people. But a decision has not been taken on whether to provide rickshaws to Delhi Airport Limited (DIAL) and to allow non-AC rickshaws and handcarts to the airport. Badhwar said that DC employees from Shimla were allowed to take the flight to Delhi and return on the same day. She said that the bus fare from Shimla to Delhi at peak hours is about Rs 3,500 and the

Users have access to a wide variety of content and media through various electronic devices. For example, users can watch television shows and/or movies, listen to music, shop for items, participate in social media, participate in gaming sessions, etc. through various devices, such as computers, smartphones, tablets, game consoles, music devices, etc. However, with such wide availability of content and media options, the user can spend large portions of time consuming the content and/or media that might otherwise be more productive (e.g., working on a project, spending quality time with a family member, etc.). With the proliferation of these electronic devices, many users already own a large number of these devices. As such, users are often already carrying more than one device for different functions and purposes. Nonetheless, the physical presence of these devices can consume the user's time and attention and render the user's daily activities more difficult to complete. Some electronic devices provide content and/or media playback capabilities. However, current electronic devices can
