Virtual Audio Streaming

[Download](#)

Virtual Audio Streaming is a simple-to-use software utility that adds a virtual sound card to the operating system in order to enhance the physical one. It is easy to install and configure. Easy-to-use interface The interface is made from a regular window with a plain and simple structure, where you can get audio from your computer by setting the app as the default sound playback device. Configure device settings In addition, it is possible to select the real microphone from a drop-down list and customize audio settings pertaining to buffering, sample rate, bits per sample and channel mode. The audio can be streamed to other applications or the real sound card.

---

You can start a recording session with one click after specifying the saving directory, as well as open the location without leaving the app's interface. As far as driver options are concerned, you can ask Virtual Audio Streaming to draw the audio wave and run at every Windows startup until further notice, adjust the speaker and microphone levels, as well as set the value of the internal buffers.

**Evaluation and conclusion** The tool does not put a strain on PC performance, since it consumes a low quantity of CPU and RAM. It is very responsive to commands and works well, without triggering Windows to hang, crash or pop up error messages. All in all, Virtual Audio Streaming can come in handy to all users looking to enhance their sound card's capabilities. [Read more](#)

When you need to get a particular bit from a file,

---

you usually want to get it right away. It's better than asking for another one a little later. VLC does just that. The cross-platform application is a great choice for playing video, and in this article we'll show you how to take advantage of its time manipulation features. First things first: How to time-shift a video Let's say you have some video that you want to embed in your website. You might not want to show the entire thing right away, though, as it's quite long. Instead, you want to start playing a clip that represents, for example, the opening of your website. Use the "Time range" option to choose the beginning and the end of the clip. Start playing the video and then use the time indicator in the right corner of the window. You'll notice that you can drag the start and end points with the mouse. The

Vast media-unlocked mobile Internet content, such as video streaming and online games, is a significant source of revenue for mobile network operators. Customers are willing to pay for mobile content and services on a pay-as-you-go basis, but mobile network operators do not have sufficient revenues from such services to fund their high capital investment in networks. As reported by "McClatchy Newspapers," in August 2011, Verizon announced plans to buy AOL for US\$4.4 billion to expand its reach in the mobile Internet and offer new services. The acquisition would also extend Verizon's presence in the digital entertainment market

---

and allow it to offer additional products and services to its growing base of customers. “Bringing together Verizon’s unmatched fiber network with AOL’s consumer brands to offer a broad array of content, mobile services and related advertising solutions will allow us to address a growing demand for more ways to access mobile Internet content and services,” said Lowell McAdam, CEO of Verizon. “Our combined approach will address rapidly growing mobile needs, driving more traffic to broadband networks, while providing advertisers with greater reach and efficiency to reach consumers.” “The AOL brand, with its highly engaged community of more than 25 million monthly unique visitors and an engaged audience, together with our media and entertainment businesses, has enormous

---

potential to drive growth,” said Tim Armstrong, CEO of AOL. “By combining AOL with Verizon, we will offer the industry’s largest and most compelling portfolio of content, advertising and other mobile products and services to consumers.” As the leading provider of mobile voice, data and messaging services in the U.S., Verizon has a robust mobile Internet business, where subscribers can use 3G and 4G LTE mobile broadband to access a growing array of entertainment, e-commerce, online games and other Internet-based services. Verizon’s mobile business is the largest in the U.S., according to leading industry analyst firm, Cowen & Co., with more than 163 million total subscribers as of June 30, 2011. Verizon also offers an expanding content portfolio, including AOL

---

properties Huffington Post, TechCrunch, Engadget and Daily Finance. In addition, AOL.com, one of the largest online destinations in the world, offers a growing variety of Web content, including blogs, video, games, shopping, professional services, dating and more. The purchase price for AOL is US\$1.
