What's New in the Cool Music Record Edit Station?

Cool Music Record/Edit Station is a lightweight audio editor and recorder that comes packed with many useful features for helping you cut, copy and mix audio files. Once you run the application, you can perform the following operations: create a new file or open an existing one, or record stream from the sound card. The user interface is crowded, and you may spend some time trying to understand the function of each dedicated parameter. The help manual comes in handy in this case, as it gives you details about each operation. The program works with a wide range of file formats, namely WAV, MP3, MP2, WMA, OGG, CDA, VOX, RAW, G721, AU, AIF, MPC, DSP, and others. It offers support for the same formats when it comes to exporting options. Thanks to its built-in player, you can listen to the current track or any part of the song. A region can be selected by either using the mouse cursor or specifying the start and end position of each song manually. The program features a bar, waveform, spectrogram, spectrum and level meter, and the editing capabilities can be applied for the right and left channel. Plus, you can cut or copy the selected part of an audio file to the Clipboard, as well as perform various operations, such as deleting a common or silent section from the selected part, trimming and cropping the item, and editing the file tags. It is possible to zoom in or out of the waveform, and apply several effects, such as amplify, compressor, delay, fade in and out, flanger, invert, normalize, reverb, reverse, silence, stretch, vibrato, and others. You may also increase or decrease the speed of the selected region, apply different filters (e.g. band pass, high pass, notch), reduce noise effects and voice breath, and insert silence and noise. Overall, Cool Music Record/Edit Station proves to be a fully-featured application that helps users perform various audio editing operations. Unfortunately, it doesn't offer an intuitive layout, and rookies may find it pretty difficult to work with this tool. Personal Audio Recorder Studio gives you the possibility to record your own audio with PC-compatible microphone or music input. You can use the program's output to make your own MP3s or CDs. The best way to make an audio recording is to set a specific audio recorder window. The program offers a choice between two audio recorders: one that is for real-time

recording, and another one for making a MP3 or CD. The real-time recorder is useful for recording your own music. You have to define the recording start and stop time by using the track start/stop controls. You can use the process record button to make the program stop automatically when
